

IT TOOLS ASSIGNMENT

NAME – RUPAL PATEL

ROLL NO – 59

CLASS – FYIT

1) Explain Green Computing with its advantages

Green computing is the environmentally responsible and eco-friendly use of computers and their resources. In broader terms, it is also defined as the study of designing, engineering, manufacturing, using and disposing of computing devices in a way that reduces their environmental impact. Many IT manufacturers and vendors are continuously investing in designing energy-efficient computing devices, reducing the use of dangerous materials and encouraging the recyclability of digital devices. Green computing practices came into prominence in 1992, when the Environmental Protection Agency (EPA) launched the Energy Star program.

Advantages of Green Computing

- 1) Sustainable computing means reduced energy consumption that leads to reduce GHG emission and fossil fuel usage.
- 2) Green computing is cost effective due to less energy usage and cooling requirements.
- 3) Sustainable IT helps in the preservation and effective utilization of natural resources.
- 4) It encourages reuse and recyclability that will result in a lesser number of electronic wastes.
- 5) Green IT uses non-toxic component which do not pose any health hazard to the end-users.
- 6) It causes a considerable reduction in the quantity of heat produced from computing devices.
- 7) Sustainable computing inspires people to reduce, reuse, and recycle.
- 8) Green IT implementation helps in improving the public image of an individual or an organization.

2) What is E-waste? What can be done to reduce the impact of E-waste.

E-waste is any electrical or electronic equipment that's been discarded. This includes working and broken items that are thrown in the garbage or donated to a charity reseller like Goodwill. Often, if the item goes unsold in the store, it will be thrown away. E-waste is particularly dangerous due to toxic chemicals that naturally leach from the metals inside when buried.

Reduce impact of E-waste

Sell old Electronics: One of the best and easiest methods of reducing the electronic waste footprint is to sell or donate your electronic gadgets to those in need. If you are planning on selling, you should be able to easily find a buyer as they will have the opportunity to purchase.

the same product at a much lower price than if it were new. You get easy money while the buyer gets a nice gadget; a win-win for both.

Donate old Electronics: Donating electronics to the needy is also a practice followed by many. It not only gives the gadget a new life, but also makes you feel good about yourself. If you decide to donate your old electronic devices when you don't need them anymore, make sure to clear any information (like data in your laptop hard drive) before you donate it.

Recycle and Dispose of E-Waste Properly: Improperly disposed e-waste is becoming more and more hazardous, especially as the sheer volume of our e-waste increases. For this reason, large brands like Apple, Samsung, and other companies have started giving options to its customers to recycle old electronics. Sometimes, you may even get financial compensation for recycling your old devices.

Maintain your Electronics: One of the best ways to save your money and reduce e-waste is to keep your electronics well-maintained, to increase its life. Here are some tips to get you started.

Repurpose or Re-evaluate: Always think twice before upgrading or buying a new electronic device.

3)What are benefits of going paperless.

1)Saves Time: Digitized documents are stored in a central repository, which is basically a well-organized digital filing cabinet where all of your documents live.

2)Saves Space: Paper takes up a lot of space – as do filing cabinets and space to store those filing cabinets. Books and bookshelves are bulky, too. What's worse, paper keeps piling up, oftentimes accumulating more quickly than it can be sorted and organized. This is particularly true of industries that have long mandatory retention periods for paperwork like the financial industry.

3)Saves Money: Going digital improves process efficiency, saving you money. Paperless offices can process a much larger volume of paperwork compared to traditional offices in the same amount of time.

4)Promotes the Environment: Manufacturing paper products produce greenhouse gases, causing deforestation and global warming. Recycling can offset some of the environmental impact, but not by much. Most paper eventually ends up in a landfill. Further, ink and toners contain volatile compounds and non-renewable substances which are damaging to the environment. It is much more sustainable to simply reduce paper use altogether by switching to a paperless office.

5)Boosts Security: Physical documents are hard to track – reams of paper can get lost, misfiled or destroyed without anyone noticing. It can also be difficult to monitor the access, printing and copying of sensitive files. Document management software

has advanced security capabilities that can tackle these challenges.

4)What is Github? Give advantages of using GitHub.

GitHub is a code hosting platform for version control and collaboration. It lets you and others work together on projects from anywhere. To create your own Hello World repository and learn GitHub's Pull Request workflow, a popular way is to create and review code.

Advantages of Using GitHub.

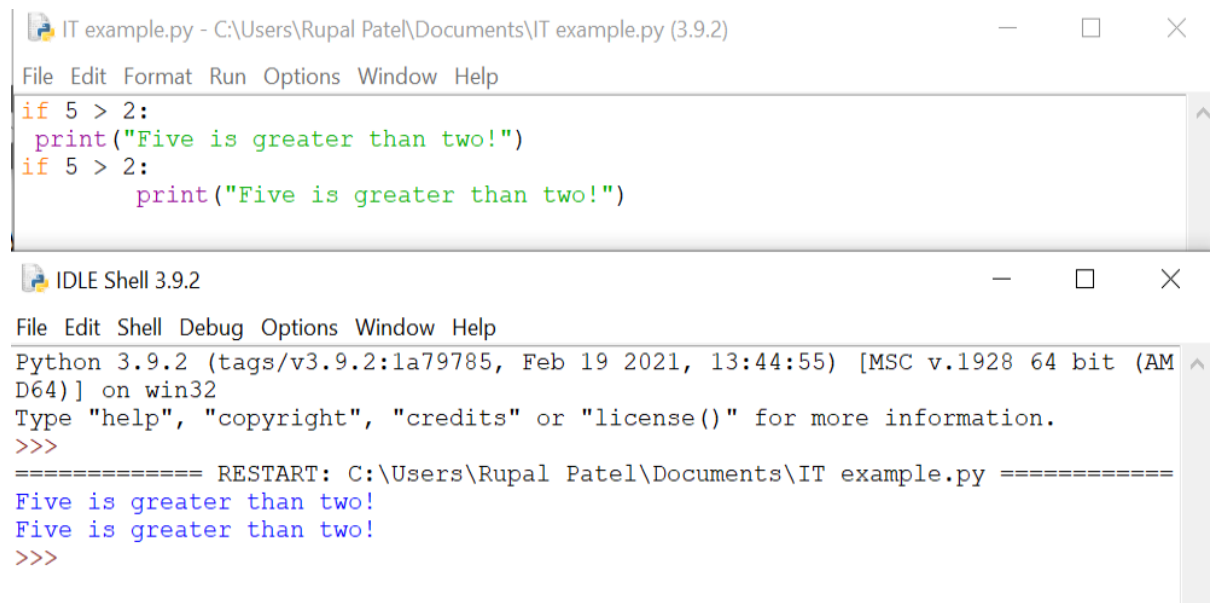

1)By using GitHub, you make it easier to get excellent documentation

2)Most companies look into the GitHub profiles, If the profile is available, you will have a higher chance of being recruited even if you are not from a great university or college.

4)With so many other programming languages to learn for setting up projects, it's really a big benefit to have your content inputted in a format without having to learn yet another system.

5)Moreover, GitHub is one of the largest coding communities around right now, so it's wide exposure for your project.

5)Write a program using PEP8 rules.

The screenshot displays two windows from a Python IDE. The top window, titled 'IT example.py - C:\Users\Rupal Patel\Documents\IT example.py (3.9.2)', contains the following Python code:

```
if 5 > 2:
    print("Five is greater than two!")
if 5 > 2:
    print("Five is greater than two!")
```

The bottom window, titled 'IDLE Shell 3.9.2', shows the execution output:

```
Python 3.9.2 (tags/v3.9.2:1a79785, Feb 19 2021, 13:44:55) [MSC v.1928 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
